Authorization

Before authorization, you should register your application with the Identity Provider.

- » Redirect URL, e.g.: <http://localhost:8080/auth/callback>
- « Client ID: <get from the cloud administrator>
- « Client Secret: <get from the cloud administrator>

Authorization Request

- » **Client ID:** to authenticate the client in the authorization server
- » **Redirect URL:** endpoint to redirect the user after sign-in
- » **Response type:** typically, *"code"*
- » **Scopes:** list of permissions required for the client, e.g. *["openid", "profile", "email", "offline_access"]*

Thank you!
